Welcome to PIMedia image bank:

PIMedia replaces our Google drive image bank.

PIMedia is in English but it is possible to use the search function in Danish.

PIMedia contains folders with pictures, manuals, logos and videos.

The Picture folder and the Manuals folder is built like our website:

Fence

House _ Garden

Playground

Ventus

Via the menu or via the search field it is possible to search for item number, DB-number, EAN number and product name.

Click the check mark below a photo to select it. Click View & Download at the top right when all images are selected. Now it is possible to choose the format and resolution needed. The original format is the best quality. Original resolution or 300 DPI is in print quality whereas 150 and 72 DPI are for use on a website.

Select image format and resolution and click the green Download bar to **download.** Open/show the folder to extract the files and the images are downloaded.

In the folder there are also a web file and an Excel file included, which provides you an overview of the images downloaded. You can select the summary web icon to see a complete overview of the images selected. Here you can search amongst all images with Ctrl + F.

Remember! To download pictures and manuals separately if pictures are needed in another format than the original. Downloading pictures and manuals together in the original format is ok. But if format changes from the original a manual will be downloaded as a image file instead of a PDF.

Have fun with the PIMedia image bank.

Best regards,

NSH NORDIC A/S
